

Lubuntu 20.04 installs different than previous versions.  
PLEASE NOTE: 20.04 no longer supports a 32 bit processor.

Boot from DVD

Click “START LUBUNTU”

A mini LUBUNTU system will appear on the screen

Second ICON on left says “INSTALL LUBUNTU”

Click “INSTALL LUBUNTU” Icon (2<sup>nd</sup> from top on the left)

WAIT

Answer questions

locations

time zone

.

.

When it asks where to install I click erase disk

The system will then install itself.

When finished click “DONE” and the system ask you to remove the DVD and then it will reboot itself.

After the reboot, you **don't** have to install LIBREOFFICE. It comes preloaded on 20.04! I still go and change the ‘default save’ format to Word, Excel, and Power Point.

You're done!!
